

GENETIC CERTIFICATE

Ms Helle SINCLAIR

Fjellerup Bygade 36
8585 Glesborg
DENMARK

Name : **Viva la Vida From Orsina's
Land**

Specie : **Dog**
Breed : **Bernese Mountain Dog**

ID Number : **705 091 000 018 933**
Pedigree Number : **DK20153/2019**

Gender : **Female**
Birth date : **10/12/2018**

Owner :
SINCLAIR Helle
8585 Glesborg (DK)
Customer Nb : C75415

Sample Number : **683 535**
Sample type : Blood sample
Sample date : 23/03/2020
Request date : 30/04/2020

Sample realized by :
KLITGAARD Marianne (Veterinarian)
7900 Nykobing Mors (DK)
Official Nb : **1260**
Authenticated sample

File Nu. : 176 395
Animal Number : 216 526
Result code : 406418

Histiocytic Sarcoma (Test SH)

Result : **Index A**

Interpretation : The individual tested has a four times lower risk of developing Histiocytic Sarcoma.

This genetic test should be just one of the many selection criteria. It is important within a breeding population to give priority to individuals with the best index but is also of the utmost importance when selecting breeding pairs that sufficient genetic diversity is maintained in the breed.

Result established on 14/05/2020

Certificate issued on 14/05/2020

Explanation

This genetic test for Histiocytic Sarcoma is based on 9 genetic markers (Panel SH0912) identified from scientific research on Histiocytic Sarcoma on Bernese Mountain Dogs carried out by the Canine Genetics Team of the CNRS of Rennes, France. The methods used to calculate the genetic index were based on a population of 1081 European dogs, mainly from France. The test for Histiocytic Sarcoma has three possible results expressed as an index: index A, the individual tested has a four times lower risk of developing Histiocytic Sarcoma ; index B means neutral index ; index C, the individual tested has a four times higher risk of developing Histiocytic Sarcoma. This genetic test is simply a probability test, and this must be clearly accepted by the user.

This genetic test is designed solely to be a tool to help breeders in their breeding decisions. As a probability test, the test SH is subject to error and should not therefore be used, under no circumstances, as a commercial or advertising point by breeders.

The ANTAGENE laboratory will provide the necessary state-of-the-art technology to guarantee the reliability of its genetic test.
